

JONAS GESCHKE

Jonas Geschke is a forester, ecologist, and social-environmental scientist, with a strong interest and background in wildlife ecology and management as well as nature conservation policy and practice. His research work focusses on issues related to biodiversity monitoring and data integration, research cooperation and biodiversity as well as environmental policy (IPBES, CBD, SDGs). At the Institute of Planet Sciences, University of Bern, he coordinates the Secretariat of the DFG Standing Senate Commission on Fundamental Issues of Biological Diversity and works as research associate in the German Advisory Council on Global Change.

## RETHINKING LAND IN THE ANTHROPOCENE: HOW MULTIPLE BENEFIT STRATEGIES CAN GUIDE LAND MANAGEMENT

We only have one piece of land available, which has to be used for a variety of purposes. To meet not only human needs but also the needs of nature, and to ensure that there are multiple benefits between climate protection, biodiversity conservation and food, we need to convert conventional land use to agro-systems. These should be structured in a way that is systemic, synergistic and based on solidarity.
